Technology Recruitment Assignment

Create a database of gifts from donors.
Example: Fields include Amount, Date, Type, First Name, Last Name, Email, other dimensions you think would be helpful to track

Create some interesting statistics using those gifts,
Example: Life to Date Giving. Shoot for 3 stats you think are important

Create some kind of visualization of the data or statistics you think would be interesting

Open ended task, looking for creativity as well as competency. Would love to see the following skills in play: SQL, HTML, Javascript

If possible please create a Github project and send us the link.
